

Lotus 49/49t Masking template, 1/20 scale

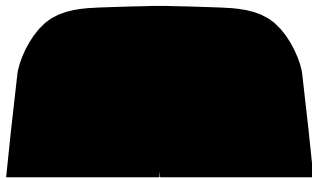

To use this template, print this page to your printer. Use the calibration bars below to make sure the sizing is correct - make sure the bars are the noted distance apart (1" top row, 1cm bottom row) If they do not match up to those measurements, adjust the scaling on your output until they come out the correct distance apart.

Use these shapes to cut out your masking medium - you may need to lay out your masking medium on a CLEAN and DRY surface, sticky side down. Simply put these templates over your medium and use them as a guide to trim your medium (first pic below).

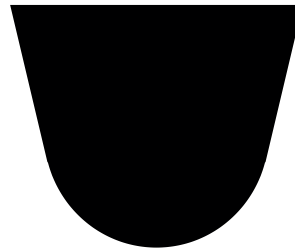

Print your car white first, then apply the red. You can use the white area of the nose top to mask off the red if you wish to butt the gold against the red paint. Gold will easily cover red and white paint.

These masks were made from the very masks I used to paint the nose in the second photo below

Nose bottom

Nose top

each mark is one inch apart

each mark is one cm apart
